### Input VAT Verification

Vatalot is a VAT Technology company - our intelligent software technology supports the work done by your accountants and auditors. Due to high transaction volumes, deductible Input VAT amounts are missed at point of entry, which are then lost in the transaction processing systems. Our technology uses the raw data from accounting systems and verifies 5 years of transaction history, which is impossible for accountants to check manually. SARS regulation allows vendors to correct and deduct these amounts for 5 years from the transaction date.

### Error Correction and Deduction

Our intelligent software detects deductible Input VAT omissions, and we assist your accountants to correct deductible Input VAT errors. We offer a risk-free analysis to our clients and only charge a once-off fee based on direct monetary gains.

We work with your accountants to correctly deduct the missed amounts, giving our client immediate cash flow advantage in the current financial year.

### Prevention and Process Correction

Our team presents the causes of missed VAT deductions to our client. We facilitate education and skill advancement to prevent future inaccuracies. We liaise with IT support and accounting advisors to optimise system settings and processes.

For a risk free assesment on your historical Input Vat, please contact us for an introductory appointment with your financial team.

We offer our service on a risk free, commission on recovery basis. We have proven a perfect success rate and positive cash flow results for a diverse client base, including FMCG, logistics, retail, manufacturing and distribution. Our model is based on our experience that every business, from SME to large and multinational companies, are assured benefit employing our service.
